In addition, it seems that the whole pattern of cortical maturation unfolds differently in smarter children. Children with higher IQ demonstrate a particularly plastic cortex, with an accelerated and prolonged initial phase of cortical increase and cortical roughing equally vigorous by the first adolescence (Shaw et al., 2006). Cerebral Mar 25th, 2024 Chapter 48: Neurons, Synapses, Signaling 1. What is a neuron? Neurons are the nerve cells that transfer information within the body. Communication by neurons consists of long-distance electrical signals and short-distance chemical signals. 2. Neurons can be placed into three groups based on their location and function.
