1 Probability, Conditional Probability And Bayes Formula In The Die-toss Example, Events $A = \{3\}$ and $B = \{3,4,5,6\}$ are not mutually exclusive, since the outcome 3 belongs to both of them. On the other hand, the events $A = \{3\}$ and $C = \{1,2\}$ are mutually exclusive. The union of two events A and B is an event that occurs if at least one of the events A or B occur. The key word in the definition of the union of two events is "at least one". The sum of the entries in this table has to be 1. Every question about a domain can be answered by the joint distribution. Probability of a proposition is the sum of the probabilities of all elementary events (i.e. all elementary events) that satisfy the proposition.
