1 Probability, Conditional Probability And Bayes Formula In The Die-toss Example, Events $A = \{3\}$ and $B = \{3, 4, 5, 6\}$ are not mutually exclusive, since the outcome 3 belongs to both of them. On the other hand, the events $A = \{3\}$ and $C = \{1, 2\}$ are mutually exclusive. The union $A \cup B$ of two events A and B is an event that occurs if at least one of the events A or B occur. The key word in the definition is "at least one".

Probability, Conditional Probability & Bayes Rule Probability Assignment To All Combinations Of Values Of Random Variables (i.e. All Elementary Events) The sum of the entries in this table has to be 1. Every question about a domain can be answered by the joint distribution. Probability of a proposition is the sum of the probabilities of the elementary events that satisfy the proposition.

General Probability, I: Rules Of Probability In other, more complicated, situations. For example, the probability that exactly one of A , B , C occurs corresponds to the area of those parts of A , B , and C in the corresponding Venn diagram.
