LIGHT Consider $\triangle ABF$ and $\triangle FOY$. These are similar triangles. We can, therefore, write $AB/OY = FB/OF$ (20.1) Similarly, from similar triangles $\triangle XOF$ and $\triangle BCA$, we have $XO/CA = OF/AB$ (20.2) But $AB = XO$, as AX is parallel to the principal axis. Also $CB = OY$. Since left hand sides are equal, we have $AB/OY = XO/CA = OF/AB$. This gives $AB^2 = OF \times OY$.

Note: Some of these concepts should be a review from fifth-grade science. Be sure to relate them to solar energy.

Procedure 1. Have each student fill a tall, clear glass or bottle with water and place a sheet of white paper on the back side of the glass so that when students look through it, they can see the inverted image of the object.

If you are using a prism, you will notice that the default material of the prism is glass, and the laser is in air (i.e., "environment" is air.) You will now need to measure the incident angle (q_i) and the refracted angle q_r . See figures below. Figure 18-4 Figure 18-5 4. You should now be able to answer post lab question # 9.
