Lecture 5 Autoregressive Models 30mins Put Simply, an Autoregressive Model Is Merely A Feed-forward Model Which Predicts Future Values From Past Values: The Term autoregressive originates from the literature on time-series models where observations from the previous time-steps are used to predict the value at the current time step Apr 2th, 2024 Heteroscedasticity And Autocorrelation Robust F And T ... Second, there is no Stata command that implements the new and more accurate approximations. In this article, we describe the new estimation command `hars` and the post-estimation test command `hart`, which implement the `hars`-smoothing Wald and T tests of Sun (2013) and Sun (2014a) for linear regression models with possibly endogenous covariates.
